Asher Woodbury

New York, New York

Data Engineer at Simon Data

Summary

Passionate about using numbers to tell stories, I led the data analysis for a nine-part investigative series into elder abuse in Rhode Island for the Providence Journal. As a data engineer at Simon Data, I surface clear insights from raw data to drive more flexible targeting for our clients' messaging. I graduated with a computer science degree from Brown University, where I also studied journalism and political science. I'm always up for a good debate.

Experience

Data Engineer at Simon Data
September 2017 - Present (2 years 1 month)

Surface clear insights from raw data to drive more flexible targeting for our clients' messaging.
Develop and maintain multiple client data pipelines.
