Ed Kurowski

Greater New York City Area

Data Engineer at Spotify

Summary

Senior back end engineer with experience in multiple languages, including Java/JEE, Python,
 and ruby. I try to keep an approach that focuses on TDD. My goal is to deliver the highest quality
 software as quickly as possible. Recently I have been focused on tackling big data problems.
 Solutions I have worked on and are currently working on involve both batch and realtime processing
 of large amounts of data.

I have worked on projects using Python, Tornado, Redis, Celery and MongoDBJava, Hadoop/Hive,
 Redshift, Tomcat/Jetty and several other technologies.

I have recently made a few OSS contributions to a project called Mosql, its used to migrate/stream
 data from MongoDB to Postgres:
